

# Cloud Fax®

## Communicate Securely and Efficiently

Antiquated fax machine technology causes many pharmacies to face issues with hardware troubleshooting, high supply and maintenance costs, and cluttered work areas. Cloud Fax is a powerful, easy-to-use, HIPAA-compliant solution. With a paperless system like Cloud Fax, hardware and supplies aren't necessary. All you need is an internet connection.

### Additional Benefits

- Eliminates pharmacy's burden to support on-premise hardware and use of outdated, less secure technologies like modems.
- Saves money on paper, ink, or other ancillary supplies.
- Frees up counter space and eliminates loud noises and interruptions.
- Easy application for a new fax number that your pharmacy (not the vendor) will own.

### Scalable and Reliable

Eliminate the risks associated with traffic overflow and downtime. Cloud Fax can handle any volume, including unexpected fax spikes, so you can maintain business continuity when it matters most. Prepare for future regulatory demands and increase convenience for your customers.

### No Busy Signal

Cloud Fax never produces a busy signal. If a fax line is engaged or down due to natural or man-made disasters, the system automatically resends the fax until it is successfully transmitted.

### Enhanced Customer Service

Improve customer relationships by eliminating frustrations and reducing lost, duplicate, and late faxes.

### Redundancy and Backups

Automatic backup and high-level redundancy prevent information loss due to interruptions from natural and man-made disasters. With Cloud Fax, your fax system will always be ready to deliver.
